

The Agent Stack

How to build AI agents that actually do work

AI AGENTS

AUTOMATION

2026

CHATBOT VS AGENT

The difference isn't intelligence — it's autonomy

	CHATBOT	AGENT
Input	You type everything	You give a goal
Tools	⊖ None	🔗 Files, APIs, browser, code
Memory	⊖ Forgets next session	💡 Remembers context
Output	Text reply	Real work done

THE FRAMEWORK

Three layers. That's the whole stack.

Brain

The LLM that reasons. Picks the right tool, decides the next step.

Tools

What the agent can touch.
Files, APIs, databases,
browser. No tools = no action.

Memory

What survives between sessions. Context, preferences, past decisions.

*Get these three right and your agent goes from toy to **teammate**.*

PROGRESS BARS

How far along is your agent?

HIGHLIGHTS & KEYBOARD

Make text pop with **highlights**

Use **mark** to draw attention to key concepts inline.

Keyboard shortcuts render as styled keys:

Ctrl + **Shift** + **P** → Open command palette

Ctrl + **L** → Ask Claude

COLLAPSIBLES

Expandable sections with `<details>`

▶ ⊕ What model should I use?

▶ ⊕ How much does it cost?

▶ ⊕ Can it run overnight?

STATS GRID

The numbers that matter

AGENT TEAM

TIMELINE

How we got here

- **2024**
ChatGPT wrappers everywhere. Copy-paste workflows.
- **2025**
Claude Code ships. Agents get tools, memory, autonomy.
- **2026**
Multi-agent teams running 24/7. The agent *is* the product.
- **NOW**
You're here. The best time to start building.

DEFINITION LIST

Key terms you'll need

≡ *MCP (Model Context Protocol)*

A standard for connecting AI models to external tools and data sources. Think USB for AI.

☐ *Claude Code*

Anthropic's CLI agent. Reads files, writes code, runs commands, manages projects. Your AI teammate in the terminal.

⚙️ *Cron Trigger*

A scheduled task that runs your agent at set intervals — daily briefings, weekly reports, overnight builds. No human needed.

TERMINAL MOCKUP

What it actually looks like

● ● ● ~/projects/my-agent

```
$ claude "deploy the new landing page"
```

- Reading project structure...

- Building with Vite...

- Running tests — 14/14 passed

- Pushing to main...

- Deploying to Vercel...

✓ Live at <https://mysite.vercel.app>

```
$ _|
```

You · 9:41 AM

Can you check if the API is still rate limiting us?

Agent · 9:41 AM

Checked the last 500 requests.
We're hitting 429s on the
[/v2/generate](#) endpoint — 12% failure
rate since 8am. The retry logic
backs off but the queue is growing.
Want me to switch to the fallback
provider?

You · 9:42 AM

Yeah do it. And log the switch.

Agent · 9:42 AM

BROWSER MOCKUP

Your agent has a dashboard

CIRCULAR PROGRESS

Agent readiness score

GLASSMORPHISM

The new aesthetic

Glass cards float with CSS animation — no JavaScript needed.

Unsplash images work natively

MARP supports remote images as backgrounds.

- `![bg](url)` — full bleed
- `![bg right:45%](url)` — split layout
- `![bg left:40%](url)` — image on left
- `brightness`, `blur`, `opacity` filters
- Multiple `![bg]` for side-by-side

SPLIT IMAGE LAYOUT

AI is eating the world

And the people who know how to **direct it** will eat with it.

- Creators who use agents ship 10x faster
- Solo founders are building what teams couldn't
- The leverage gap is widening every month

ANIMATED GLOW CARDS

Choose your path

Beginner

One agent, one task.
Get your first win.

Start here

Builder

Multi-tool agents.
Memory + crons.

Level up

Architect

Agent teams. 24/7 ops.
The whole stack.

Go deep

CODE SHOWCASE

Syntax highlighting is built in

```
// Your first agent – 4 lines of code
import Anthropic from "@anthropic-ai/sdk";

const client = new Anthropic();
const response = await client.messages.create({
  model: "claude-opus-4-6-20250414",
  max_tokens: 1024,
  tools: [readFile, writeFile, runCommand],
  messages: [{ role: "user", content: "Deploy the app" }],
});
```

MARP uses **highlight.js** under the hood — supports 190+ languages.

FLOWCHART

How agents think

Prompt → Reason → Act → Observe → repeat until done

BEFORE & AFTER

The same task, two realities

⊖ WITHOUT AGENTS

- ☐ Research the topic (45 min)
- ☐ Draft the script (2 hrs)
- ☐ Create thumbnail (1 hr)
- ☐ Edit the video (3 hrs)
- ☐ Write the description (20 min)
- ☐ Schedule the post (10 min)

Total: ~7 hours

⊕ WITH AGENTS

- ☒ Research + draft (agent, 10 min)
- ☒ Thumbnail generated (agent, 2 min)
- ☒ Auto-cut + XML (agent, 5 min)
- ☐ You review + record (1 hr)
- ☒ Description + schedule (agent, 1 min)

Total: ~1.5 hours (you: 1 hr)

Start building.

Pick one task. Give your agent tools. Watch it run.
